# Behrad Ravanbod

## DevOps Engineer

I have experience in designing DevOps pipelines and automating the tasks. I manage Linux servers, I use Kubernetes & Docker for containerized environments, Jenkins & GitLab for setting up the CI/CD pipelines, Ansible & Bash for automating the tasks, Prometheus, and some other tools for monitoring & logging.
I started programming in 2013. I have experience in languages like Golang, Python & PHP in the IT industry. I am familiar with common software principles like SOLID and design patterns, and I used them in many projects.

## WORK EXPERIENCE

**DevOps Engineer**
Snappfood (snappfood.ir) · Full-time
2024 – present
- Setup and manage new Kubernetes clusters.
- Involve in re-designing the system.
- Involve in datacenter migration
- Setup Redis-Cluster for some projects.
- Worked with Kong as an API Gateway.

**DevOps Engineer**
Payrad Smart Solutions (paybaar.com) · Full-time
2022 - 2024
- Setup and manage Kubernetes clusters.
- Develop GitOps culture using ArgoCD.
- Increased speed of CI/CD pipelines (Laravel projects) by 2x (improving/fixing Dockerfiles)
- Develop some services using Python and Flask.
- Setup RabbitMQ cluster in k8s.
- Worked with Graylog to store the logs of the apps.
- Setup Redis-Sentinel for many projects.
- Setup alerting system for the new projects
- Improved the laravel projects (tune PHP-FPM, Nginx & …)
- Decreased response time by 1.5-2x.
- Redesigned the CI/CD of Node.js & React.js projects and increased CI/CD speed by 1.5x (moved simple libraries projects to node repository).
- Migrated many projects to the new Datacenter.
- Setup ElasticSearch cluster to increase performance of the Applications.
- Migrated old MySQL databases to PostgreSQL using pgLoader.
- Involve in designing the system.
- Worked with Nexus registry (proxy+cache).

**DevOps Engineer**
Mixomoda · Part-time
2022 – 2023

## EDUCATION

**Hamedan University of Technology**
Bachelor of Science, Computer Software Engineering
2019 – 2023

## TECHNICAL SKILLS

- **Programming languages**
Golang, Python, C++, PHP
- **Operating System**
Linux, Bash Scripting, Services configurations & …
- **Container & Container Orchestration tools**
Kubernetes, Docker
- **Cloud Providers**
AWS (EC2, ELB, S3, Route53, Cloudfront, DocumentDB, AmazonMQ)
- **Databases & Search Engines**
MySQL, Redis, PostgreSQL, ElasticSearch, Metabase
- **Web Servers & Load balancers & HA tools**
Nginx, HAProxy, Keepalived, Apache
- **CI/CD tools**
Gitlab CI, Jenkins
- **Monitoring & logging tools**
Prometheus, Graylog, Loki, Fluent bit, Grafana
- **Git Servers (Self-hosting solutions)**
Gitea, GitLab
- **Infrastructure & Configuration as Code tools**
Ansible, Terraform
- **Message brokers**
RabbitMQ
- **Registries & repositories**
Nexus
- **Other related tools**
ArgoCD, Kustomize, Velero etc.

## A FEW OF OPEN-SOURCE ACTIVITIES

- **DockerWatcher** (Maintainer)

- Worked with AWS services such as EC2, Cloudfront, AmazonMQ, ELB, DocumentDB, S3 & …
- Designed Multi-environment CI/CD pipelines using Jenkins, Gitea, Ansible
- Dockerized all projects (React.js + Node.Js)
- Setup monitoring system using Prometheus, Node Exporter, cAdvisor and Grafana
- Managed & maintained Linux servers.
- Setup Nginx as a webserver.
- Setup self-hosted Docker registry.
- Setup tunnels between AWS servers & a PC to run ML Projects & processing images (Nvidia CUDA project).

**DevOps Engineer & Backend Developer**
Apex team (apexteam.net) · Part-time
2019 - 2022
- Managed & maintained Linux servers.
- Migrated legacy projects into Docker containers.
- Designed CI/CD pipelines using Jenkins & Gitea.
- Set up monitoring & logging services using Prometheus, Loki, Fluent bit & Grafana.
- Set up load balancing service using HAProxy.
- Set up Wireguard for internal usages.
- Created Automated tasks for Setting up the DevOps tools (CI/CD, load balancers & monitoring systems) using Ansible, Python & Docker-compose.
- Designed backup systems (collecting the data & uploading in ArvanCloud object storage)
- Developed services using Golang (gin) & Python (flask).
- Used Redis as a cache layer for some services.

**Backend Developer**
Freelance
2016 - 2019
- Designed Some APIs using PHP & Python.
- Migrated services into Docker containers.

**Teaching Assistant**
Hamedan University of Technology · Part-time
2020 - 2023
- Taught C++ & Java to new students.
- Created a judging system using Golang for submissions. (Automated compiling & running submissions in the docker containers)
- Created a notification system for LMS using Golang.

DockerWatcher is a monitoring solution written in Go, designed to track Docker events and notify system administrators in real-time.
https://github.com/ravanbod/dockerwatcher
- **Docker-CheatSheet** (Maintainer)
A docker cheat sheet and some examples
https://github.com/ravanbod/docker-cheatsheet
- **Terraform Awesome** (Contributor)
One of the completest Terraform repositories for providers, examples, tools, etc.
https://github.com/ravanbod/terraform-awesome
- **DevOps-Roadmap** (Contributor)
DevOps Roadmap for learning
https://github.com/ravanbod/devops-roadmap
- **Private Push Notification** (Maintainer) - archived
A project that has a backend-side (python) and an android library for the client-side. I Used socket programming for the first time in this project.
https://github.com/ravanbod/ppn-server-python
